

Alphastream Launches AlphaMCP, Bringing Private Markets Data to AlphaAI, Claude, and ChatGPT

NEW YORK, June 22, 2026 — Alphastream, the leader in AI-powered solutions for private markets, today announced the launch of **AlphaMCP**, a new capability that brings institutional-grade private markets data directly into the AI tools investment professionals use every day, including **AlphaAI**, **Claude**, and **ChatGPT**.

AlphaMCP enables firms to securely connect their private documents, structured data, institutional knowledge, and proprietary workflows to leading AI platforms. By combining trusted, normalized data with advanced agentic AI capabilities, AlphaMCP empowers investment professionals to accelerate analysis, improve decision-making, and unlock a new generation of institutional intelligence.

While large language models have transformed how professionals interact with information, AI delivers its greatest value when grounded in accurate, structured data rather than relying solely on model outputs. AlphaMCP provides that foundation by giving AI tools real-time access to a firm's source of truth.

Structured Data from Your Firm's Source of Truth

AlphaMCP directly connects AI platforms to normalized private markets data, including:

- Credit agreements, Amendments, and other legal documents
- Private and public company financials
- Limited Partnership Agreements, Side Letters, Valuation Memos and other fund documents
- Operational documents including Loan Notices, Capital Calls, and Distribution Notices
- Credit Memos and Confidential Information Memoranda
- and more

With AlphaMCP, teams can ask questions in natural language, compare and redline documents, analyze portfolio risk, and access critical information without leaving their AI platform of choice. New AlphaSkills and use cases are being added continuously.

Built for Mission-Critical Private Markets Workflows

AlphaMCP is designed for the daily work of investment, legal, compliance, operations, investor relations, and deal teams.

Key capabilities include:

Plain-Language Access to Complex Data

Ask questions in natural language and receive instant, evidence-backed answers drawn directly from your firm's data.

Portfolio Analysis and Risk Intelligence

Analyze portfolio-wide exposures and identify risks across credit agreements, loan documentation, and investor contracts. Instantly evaluate covenant tripwires, PIK exposure, MFN provisions, compliance obligations, and other critical risk factors.

Auditability and Governance

With Alphastream, every answer is fully traceable to source documents. Users can validate outputs, review supporting evidence, and maintain compliance through role-based permissions and enterprise controls. No black boxes. No unverifiable outputs.

Scale Without Complexity

Combine structured private markets data with historical financials, portfolio information, and other enterprise data sources—without CSV exports, custom integrations, or manual workflows. AlphaMCP can be deployed in minutes.

Key Features

Unified Private Markets Taxonomy

AlphaMCP standardizes data across credit agreements, amendments, LPAs, side letters, loan notices, fee forms, legal opinions, and other critical documents, creating a common language across the enterprise.

Highly Accurate Structured Data

Alphastream's proprietary AI combined with human-in-the-loop review processes ensures that data is accurately extracted, normalized, and validated from source documents.

Enterprise-Grade Security

Data remains within a customer's environment and security framework. Organizations maintain control over access, governance, and deployment architecture, including support for private cloud and VPC environments.

Workflow Integration

AlphaMCP seamlessly connects with enterprise workflows, downstream systems, and operational processes to deliver intelligence where teams already work.

No New Application to Learn

Analysts can work directly within AlphaAI, Claude, or ChatGPT and access cited, source-backed intelligence inside the tools they already use.

Built for the Future of Private Markets

"AI is only as good as the data it operates on," said **Vijay Gulipalli, Founder and CEO of Alphastream**. "You can't put smart AI on top of fragmented, inconsistent data and expect reliable outcomes. What matters is creating a common ontology and standardization layer that powers document intelligence, workflow intelligence, and ultimately decision intelligence. AlphaMCP brings that foundation directly into the AI tools our customers use every day."

With AlphaMCP, Alphastream extends its platform into the broader AI ecosystem while continuing to expand the capabilities available through AlphaAI and partner platforms. Built on open standards, AlphaMCP delivers the trusted infrastructure private markets firms need to adopt AI confidently today and scale its value tomorrow.

About Alphastream

Founded in 2019, Alphastream is the leader in AI-powered workflows for private markets. The company helps investment firms, law firms, financial institutions, and other private

markets participants automate mission-critical workflows across the private markets lifecycle.
